Detailed Complaint Statement:

I purchased a Samsung Galaxy S24 Ultra from your NovaStore on 14 September 2026. After only 9 days of standard use, the device began exhibiting severe overheating even during light usage such as browsing and calls. By 22 September 2026, the rear panel of the phone showed visible physical swelling near the bottom edge -- a clear indication of a defective or failing lithium-ion battery cell.

The battery temperature reached 54 degrees Celsius during a standard 15-minute call. The device now charges extremely slowly (0 to 20% in 45 minutes on original 45W charger) and intermittently shuts down at 35% battery. I am deeply concerned about the safety risk -- a swollen Li-ion battery poses fire and explosion hazards.

I immediately stopped using the device and am filing this urgent complaint requesting an immediate replacement under your warranty policy or a full refund. I have photo evidence of the swelling attached to this complaint.
